Four- 4's

Think- Pair - Share

Try to find every number from 1 to 20 using only four 4's- all four of them have to be used each time- and any *operation*.

Think (Independent) 5 min

Pair (bounce ideas off one another in your group)

Share (share your solutions with the class)

You need your visual
journal and a pencil

According to research at an English university, it doesn't matter in what order the letters in a word are, only that the first and last letters are at the right places. The rest can be a total mess and you can still read it without a problem. This is because we do not read every letter by itself, but the word as a whole.

Try solving the following equation using
pencil and paper

$$3 \times 4 - 8 \div 2$$

Now try using a calculator

$$3 \times 4 - 8 \div 2$$

What do you notice?

Now try using adding brackets to change your answer. How many different solutions can you come up with?

$$3 \times 4 - 8 \div 2$$

Look at the following equations. Insert brackets to make the solution true.

$$2 + 3 \times 6 + 9 = 47$$

$$2 + 3 \times 6 + 9 = 39$$

You can use a calculator to help you
